

ICTC EXPANDS ITS DOMESTIC MANUFACTURING SERVICES

BROOKSVILLE, FLORIDA- July 1, 2010- ICTC (Interconnect Cables Technologies Corp.) is pleased to announce that it has acquired the assets of STI (Symbionic Technologies Inc.). STI, located in Brooksville, Florida, has been a regional Electronic Manufacturing Services provider for over 20 years. With the acquisition of STI's assets, ICTC will be able to offer a full range of EMS services domestically to complement its extensive offshore capabilities. The formation of this new ICTC EMS division allows ICTC to offer a full range of printed circuit board assembly, both through hole and pick and place, local prototyping services and final box build and testing capabilities to our customers worldwide.

The entire management team of STI is being retained, and it gives its customers direct access to ICTC's offshore program support as well as direct access to one of Florida leading wire and harness manufacturers. ICTC anticipates further investments in both machinery and personnel in order to enhance further its domestic EMS Division. We will be incorporating our ISO 9001:2008 system throughout the division, and ICTC's recent investments in manufacturing ERP, shop floor control and logistics management systems will be standardized throughout the expanded company. "This acquisition allows ICTC to further support our customers with domestic prototyping for a seamless transition to offshore manufacturing, if and when they need us to do so," says Sareet Majumdar, President of ICTC. "With the resources of ICTC behind the extensive experience and SMT manufacturing expertise of STI, we can become one of the leaders in the EMS market in Florida," says Paul Cutting, Operations Director of the ICTC EMS Division.

About ICTC
